## Why Ultimate Contour?

-  Immediate Results
-  Quick Treatments
-  Safe & Effective
-  No Downtime
-  Little to No Pain

## Frequently Asked Questions

### What Is Ultimate Contour?

Ultimate Contour is the only FDA-Cleared low-frequency ultrasound and radiofrequency device that provides painless, immediate results. It is used most frequently to reduce the circumference of the abdomen, cellulite reduction, and skin tightening/toning.

### Why Use Ultrasound Technology?

Low-frequency ultrasound has the unique ability to disrupt fat without creating excessive heat, which means more control, less energy and less discomfort. When combined with Radiofrequency, it can aid in improving the skin's overall tone and texture.

### Whats Does it Feel Like?

Ultimate Contour Ultrasound and Radio Frequency treatments are entirely painless. Both procedures produce small amounts of heat which feel like a warm stone massage. The Ultrasound treatment will produce an audible sound to the client which can best be described as the sound a dolphin makes. Both treatments are safe, and FDA cleared.

### How Many Treatments Do I Need?

The number of treatments varies depending on the treatment area and the number of areas treated. We recommend up to six total sessions. A gradual improvement in your skin will continue, even after completion of your treatment series.

### How Long Is A Treatment?

Depending on the treatment area, treatments usually last between 10 and 40 minutes.

### When Will I See Results?

Typical Ultimate Contour Ultrasound treatments remove between one half to one full inch of abdominal fat in the very first treatment. This is repeatable with subsequent treatments to achieve the desired result. Radio Frequency treatments will produce a gradual effect for skin tightening and toning as new collagen is produced.

### How Long Do the Results Last?

Everyone is different, but the collagen you make is your own and continues accelerated production over three months and can last up to several years. Paired with proper diet and exercise, results can last for many years. We do recommend routine maintenance treatments to help maintain your initial results.
